

## PRESS RELEASE

9 February 2026

### **Perenco Congo successfully installs Kombi 2 platform on the KLL field**

Perenco Congo is proud to announce the successful installation of the new Kombi 2 platform on the Kombi-Likalala-Libondo II (KLL II) field, marking a key milestone in the redevelopment of this historic field, more than 20 years after the drilling of its last well.

This major project represents an investment of over 200 million dollars, demonstrating Perenco's long-term commitment to supporting energy development in the country.

Designed as a new-generation infrastructure, Kombi 2 plays a central role in the field's future performance, thanks to improved water and effluent treatment, increased associated gas recovery, and 8 MW of electricity generated by its two gas turbines, thereby ensuring greater energy autonomy for operations.

Kombi 2 is a forward-looking platform. It will host a six-well drilling campaign starting in 2026, with the aim of increasing production, optimising the field's recovery factor, and extending its life in a sustainable manner thanks to facilities adapted to current standards.

Connection work is currently underway, with commissioning scheduled for early March 2026.

**Commenting on the announcement, Gregoire de Courcelles, Managing Director of Perenco Congo said:**

*"This project is a concrete example of Perenco's commitment to investing in high-performance, responsible, and value-creating infrastructure that promotes the sustainable development of national resources. Congratulations to all the teams involved in this collective success."*

### **About Perenco in Congo**

Congorep and Perenco Congo are the two operational entities that embody "Perenco in Congo".

A key player in the Congolese oil sector since 2001, Perenco in Congo is an independent hydrocarbon producer involved throughout the project lifecycle, from exploration to decommissioning, thanks to in-house expertise covering all upstream oil sectors. A recognised expert in the optimisation of mature fields and the development of marginal fields, its production amounts to 72,500 barrels of oil and gas per day (2025).

The successful redevelopment of Emeraude, the performance of the PNGF Sud fields, or even the recent permits (Ikalou – Mwafi – Awa – Foukanda – Djambala) illustrate the strength of a model based on proximity, local investment, and long-term performance.

An ambitious and responsible player in the Congolese oil landscape, its employees deploy versatility and genuine technical expertise to support the economic and human development of the Republic of Congo while respecting the environment. Perenco Congo is part of Perenco, which operates in 12 partner countries, and is one of a group of several companies in the energy sector owned by the Perrodo family.
